ELIO’S LITTLE DISCOVERIES

The Clock That Stopped

멈춘 시계

나무 · 함께 읽기 · 12장면

The clock on the kitchen wall stopped at eight while everyone slept. In the morning nobody looked up at it, and the hands did not move.

Elio thought it was still early, so he swept the stone step twice and stacked the clean bowls into a tall, careful tower, one by one.

Mum thought it was early too. She set the bread dough by the sunny window to rise, then went out to the garden with her basket.

By the time Elio came in, the dough had climbed over the rim of the bowl and onto the table. “It cannot be eight,” said Mum.

She tapped the round clock with one paw. It did not tick. The little key on its side hung still on its short chain.

“The spring ran down,” said Mum. “A clock has to be wound every week, or it stops and the hands stay where they are.”

Next morning, Elio pushed a straight stick into the garden bed, and Bori marked the tip of its long morning shadow with a small pale pebble.

At first the shadow was long. Through the day it grew short, then long again on the other side, and three pebbles marked the curve.

“Watch the shadow,” said Mum. “When it is shortest, the sun is highest in the sky, and the morning turns into the afternoon.”

They waited for the next noon. When the shadow was shortest of all, Mum set the clock to twelve and wound it until the key would turn no more.

By evening the clock was still ticking softly on the wall. Elio marked the shadow again and again with small pebbles until the light faded.

“Tomorrow we wind it before breakfast,” said Mum. Elio put the pebbles in a neat row on the garden path, ready for another day.

함께 발견해요

읽기 전

표지의 벽시계와 부엌을 봐요. 시계가 멈추면 하루가 어떻게 달라질지 상상해 봐요.

함께 읽을 때

시계 바늘이 움직이지 않는 장면과 그림자가 길어졌다 짧아지는 장면을 나란히 봐요.

생각 나누기

가장 짧은 그림자가 왜 한낮을 알려 줄까요? 시계가 없을 때 시간을 어떻게 알 수 있을지 이야기해 봐요.

생활에서

맑은 날 창가에 막대를 세우고 그림자를 하루에 몇 번 살펴봐요. 흐린 날에는 이 방법이 통하지 않는다는 것도 함께 확인해요.

생활 속 관찰과 어림을 다룬 긴 함께 읽기 원고 초안이에요. 과학 단원이나 시간 읽기 평가가 아니에요.
